

METEOR 1600C WEATHER RADAR

Based on C-Band klystron technology, the METEOR 1600C offers sophisticated weather detection and warning capabilities as required by aviation users. Its technological superiority is due to a fully coherent system design, offering optimum detection capability by maximum clutter suppression and improved signal-to-noise ratio.

The METEOR 1600C is streamlined for medium range applications like e.g. airport terminal areas and the specific needs of aeronautical users. In combination with Rainbow® 5, the most up-to-date software package for meteorological users, the METEOR 1600C is optimized for the detection of hazardous weather phenomena like micro bursts, wind shear, and gust fronts.
