

COSSOR radar type 21 with M.T.I.

The Aerial Head, jack-supported, is suitable for mobile, tower or roof mounting. A Secondary Radar aerial can be mounted on top of the scanner, as shown here.

Either single or twin channel installations are available.

To be shown at Farnborough this year — a new Cossor high-power S-band surveillance radar, complete and self-contained in a single trailer. The Type 21 is a high-definition radar with a vertical coverage of $0-45^{\circ}$ without beam tilting or switching. Moving target indication is provided and is fully controllable. Anti-rain facilities, including circular polarisation, are provided. All equipment is shock-mounted for rough terrain, and the cabin accommodates two operators and a technician. Peak power: 500KW.

Accessibility: The magnetron, like all major units, is readily accessible.

Each electronic chassis is serviced from the front — whilst operating.
